

Angeline Nicole Faina

in/lynfaina | lynfaina.io

PROFESSIONAL SUMMARY

Cybersecurity and Threat Management student completing a co-op term at Seneca ITS. Experienced in incident response, digital forensics, SIEM deployment, log analysis, threat intelligence, and vulnerability assessment. Bridges software development and security operations through a Computer Programming background. Proactive, and hands-on across the full cybersecurity domain.

TECHNICAL SKILLS

Cybersecurity & Intel	Incident Response, MITRE ATT&CK/ATLAS/CAR, OWASP Top 10, NIST Framework, OpenIOC, STIX/TAXII, Threat Modeling, Vulnerability Assessment.
Digital Forensics	Belkasoft X, SIFT Workstation (Autopsy, Volatility), WAZUH SIEM/EDR, Wireshark, Fail2Ban, Kali Linux (Hydra, Burp Suite, mitmproxy).
Cloud & Infrastructure	AWS (EC2, VPC, WAFF, GuardDuty, CloudTrail, CloudWatch, S3, IAM, ALB), Linux (Kali/Ubuntu), Windows Server (Active Directory), Suricata IDS.
SIEM & Monitoring	ELK Stack (Elasticsearch, Logstash, Kibana), Splunk Enterprise, Amazon GuardDuty, WAZUH.
Development & APIs	Python (Pandas, PySpark), Java/Kotlin, Android Studio, C/C++, REST APIs, Node.js, PostgreSQL, HTML/CSS, COBOL.
Project Management	JIRA (Agile/Scrum), Confluence, Git/GitHub, SDLC, Technical Documentation.

EXPERIENCE

ITS Technologist (Co-op) <i>Seneca Polytechnic - ITS</i>	Apr 2026 - Present, Toronto, ON
Performing hands-on IT and cybersecurity support within Seneca's ITS department, applying knowledge of network security, incident response, and system administration in a real-world enterprise environment.	
Barista <i>Matcha Haus</i>	Apr 2026 - Present, Toronto, ON
Creating specialty matcha and coffee beverages in a high-volume café while delivering exceptional customer service and resolving guest concerns, demonstrating communication and composure under pressure.	
Technical Volunteer <i>Google Developers Group (GDG) Cloud DevFest</i>	Nov 2025, Toronto, ON
Served as the primary lab troubleshooting contact for attendees working with Google Cloud CLI and Gemini Enterprise AI tools; resolved technical bottlenecks in real time to keep event sessions on schedule.	
Cashier & back of the House <i>Swiss Chalet</i>	Jan 2023 - Apr 2026, Toronto, ON
Maintained high performance under pressure in a fast-paced, regulated environment (SafeCheck Certified); collaborated with team to streamline closing workflows.	

PROJECTS

Security Monitoring Dashboard (ELK Stack) Capstone Project <i>Seneca Polytechnic</i>	Jan 2026 - Apr 2026
Designed and deployed a production-ready SIEM on AWS for simulated NHSC environment using ELK Stack within a segmented VPC (WAF/ALB, EC2/PostgreSQL, GuardDuty/CloudTrail/CloudWatch); built	

automated Logstash pipelines reducing average threat detection from hours to minutes.

- Ran DoS and SQL injection attack simulations to validate Kibana dashboard detection accuracy; migrated full infrastructure mid-project via AWS CLI Infrastructure-as-Code scripts. Managed 10 milestones with JIRA (Agile/Scrum), delivering requirements analysis, architecture design, cost reporting, and final presentation.

Brute Force Attack Investigation via Log Analysis | CYT250 Group Project | Seneca Polytechnic **Feb 2026**

- Simulated an SSH brute force attack (Kali/Hydra) and investigated 791+ ailed logins via auth.log and Fail2Ban Logs; executed a all 5-phase IR lifecycle - collection, correlation, automated containment (Fail2Ban + iptables), incident ticketing, and post-incident hardening (MFA, SSH key auth, ACLs).

MitM Attack on Mobile Applications | CYT230 Project | Seneca Polytechnic **Mar 2026**

- Developed a custom Android messaging app in two versions (HTTP and HTTPS with certificate pinning) to demonstrate MITM vulnerability in a controlled lab.
- Executed ARP spoofing attacks using Wireshark, mitmproxy, and Burp Suite to extract plaintext credentials and session tokens from the insecure version; validated TLS + certificate pinning as effective defenses against interception. Produced remediation guidelines aligned with OWASP MSTG standards.

Mobile Device Forensics - Belkasoft | CYT215 Project | Seneca Polytechnic **Apr 2026**

- Completed two Belkasoft CTF forensic investigations using Belkasoft X: analyzed an Android device image to identify a drug trafficking suspect, recovering delivery GPS coordinates, a Bitcoin wallet address, supplier IMEI, and 303-day activity timeline from app data, messages, and location artifacts.
- Investigated an iPhone image in a counterfeit currency case, extracting Apple ID, owner identity, Telegram contacts used for criminal coordination, residential geolocation, and a lined laptop username; demonstrating cross-device artifact correlation in a multi-suspect investigation.

Legacy Systems Security (COBOL) | Personal Project **Jan 2026 - Present**

- Proactively re-learning **COBOL** to understand the security architecture of legacy banking mainframes.
- Developing a financial transaction module to test **input validation** and prevent logic errors in mission-critical data processing.
- Demonstrates a strong **intellectual curiosity** to understand the “root” technologies that power modern financial institutions.

IoT Security Infrastructure & Threat Monitoring | Seneca Polytechnic **Dec 2025**

- Designed a secure IoT network using **AWS IoT Core** and Raspberry Pi, implementing certificate-base authentication to prevent unauthorized device access.
- Deployed **Suricata IDS** to monitor network traffic and detect reconnaissance scans, visualizing attack patterns in real time.

EDUCATION

Cybersecurity and Threat Management (Ontario College Graduate Certificate) **Expected Oct 2026**

Seneca Polytechnic - Toronto, ON

- Current: Work Term Co-op (CYTC) - ITS Technologist, Seneca Polytechnic, Summer 2026.
- Term GPA 4.0 - President's Honour List, Fall 2025
- Coursework: Incident Response, Digital Forensics, Threat Intelligence, Network Defense, Penetration Testing, Security Operations, Capstone

Computer Programming (Ontario College Diploma) | GPA: 3.7 (with Honours) **May 2023 – Aug 2024**

Seneca Polytechnic - Toronto, ON

- Secure coding practices, full-stack development (Node.js, REST APIs), SDLC, Agile methodologies.
